SAFETY INFORMATION

WARNING

If the information in these instructions are not followed exactly, a fire or explosion may result causing property damage, personal injury or loss of life.

- Do not store or use gasoline or other flammable vapors and liquids in the vicinity of this or any other appliance.
- WHAT TO DO IF YOU SMELL GAS:
  - Do not try to light any appliance
  - Do not touch any electrical switch; do not use any phone in your building.
  - Immediately call your gas supplier from a neighbor’s phone. Follow the gas supplier’s instructions.
  - If you cannot reach your gas supplier, call the fire department.

- Installation and service must be performed by a qualified installer, service agency or the supplier.
• Do not burn wood or other materials in this fireplace.
• Adults and especially children should be alerted to the hazards of high surface temperatures and should stay away to avoid burns or clothing ignition. Supervise young children when they are in the same room as the fireplace.
• Clothing or other flammable material should not be placed on or near the fireplace.
• Due to high temperatures, the fireplace should be located out of traffic and away from furniture and draperies.
• Ensure you have incorporated adequate safety measure to protect infants/toddlers from touching hot surfaces.
• Even after the fireplace is out, the glass and/or screen will remain hot for an extended period of time.
• Check with your local hearth specialty dealer for safety screens and hearth guards to protect children from hot surfaces. These screens and guards must be fastened to the floor.
• Any safety screen or guard removed for servicing must be replaced prior to operating the fireplace.
• It is imperative that the control compartments, burners and circulating blower and its passageway in the fireplace and venting system are kept clean. The fireplace and its venting system should be inspected before use and at least annually by a qualified service person. More frequent cleaning may be required due to excessive lint from carpeting, bedding material, etc. The fireplace area must be kept clear and free from combustible materials, gasoline and other flammable vapours and liquids.
• Under no circumstances should this fireplace be modified.
• This fireplace must not be connected to a chimney flue pipe serving a separate solid fuel burning appliance.
• Do not use this fireplace if any part has been under water. Immediately call a qualified service technician to inspect the fireplace and to replace any part of the control system and any gas control which has been under water.
• Do not operate the fireplace with the glass door removed, cracked or broken. Replacement of the glass should be done by a licensed or qualified service person.
• Do not strike or slam shut the fireplace glass door.
• This fireplace uses and requires a fast acting thermocouple. Replace only with a fast acting thermocouple supplied by Wolf Steel Ltd.
• Pressure relief doors must be kept closed while the fireplace is operating to prevent exhaust fumes containing carbon monoxide, from entering into the home. Temperatures of the exhaust escaping through these openings can also cause the surrounding combustible materials to overheat and catch fire.
• Only doors / optional fronts certified with the unit are to be installed on the appliance.

NOTE: CHANGES, OTHER THAN EDITORIAL, ARE DENOTED BY A VERTICAL LINE IN THE MARGIN.
The following materials and workmanship in your new NAPOLEON® gas fireplace are warranted against defects for as long as you own the fireplace. This covers: combustion chamber, heat exchanger, stainless steel burner, phazer™ logs and embers, gold plated parts against tarnishing, porcelainized enameled components and aluminum extrusion trims.

Electrical (110V and millivolt) components and wearable parts such as blowers, gas valves, thermal switch, switches, wiring, remote controls, igniter, gasketing, and pilot assembly are covered and NAPOLEON® will provide replacement parts free of charge during the first year of the limited warranty.

Labour related to warranty repair is covered free of charge during the first year. Repair work, however, requires the prior approval of an authorized company official. Labour costs to the account of NAPOLEON® are based on a predetermined rate schedule and any repair work must be done through an authorized NAPOLEON® dealer.

**CONDITIONS AND LIMITATIONS**

NAPOLEON® warrants its products against manufacturing defects to the original purchaser only — i.e., the individual or legal entity (registered customer) whose name appears on the warranty registration card filed with NAPOLEON® — provided that the purchase was made through an authorized NAPOLEON® dealer and is subject to the following conditions and limitations:

This factory warranty is nontransferable and may not be extended whatsoever by any of our representatives.

The gas fireplace must be installed by a licensed, authorized service technician or contractor. Installation must be done in accordance with the installation instructions included with the product and all local and national building and fire codes.

This limited warranty does not cover damages caused by misuse, lack of maintenance, accident, alterations, abuse or neglect, and parts installed from other manufacturers will nullify this warranty.

This limited warranty further does not cover any scratches, dents, corrosion or discoloring caused by excessive heat, abrasive and chemical cleaners nor chipping of porcelain enamels parts, mechanical breakage of PHAZER™ logs and embers, nor any venting components used in the installation of the fireplace.

NAPOLEON® warrants its stainless steel burners against defects in workmanship and material for life, subject to the following conditions: During the first 10 years, NAPOLEON® will replace or repair the defective parts at our option free of charge. From 10 years on, NAPOLEON® will provide replacement burners at 50% of the current retail price.

In the first year only, this warranty extends to the repair or replacement of warranted parts which are defective in material or workmanship provided that the product has been operated in accordance with the operation instructions and under normal conditions.

After the first year, with respect to this President's Limited Warranty, NAPOLEON® may, at its discretion, discontinue all obligations with respect to this warranty by refunding to the original warranted purchaser the wholesale price of any warranted but defective part(s).

After the first year, NAPOLEON® will not be responsible for installation, labour or any other costs or expenses related to the reinstatement of a warranted part, and such expenses are not covered by this warranty.

Notwithstanding any provisions contained in this President's Limited Lifetime Warranty, NAPOLEON®'s responsibility under this warranty is defined as above and it shall not in any event extend to any incidental, consequential or indirect damages.

This warranty defines the obligations and liability of NAPOLEON® with respect to the NAPOLEON® gas fireplace and any other warranties expressed or implied with respect to this product its components or accessories are excluded.

NAPOLEON® neither assumes, nor authorizes any third party to assume, on its behalf, any other liabilities with respect to the sale of this product. NAPOLEON® will not be responsible for over-firing, downdrafts, spillage caused by environmental conditions such as rooftops, buildings, nearby trees, hills, mountains, inadequate vents or ventilation, excessive venting configurations, insufficient makeup air, or negative air pressures which may or may not be caused by mechanical systems such as exhaust fans, furnaces, clothes dryers, etc.

Any damages to fireplace, combustion chamber, heat exchanger, brasse trim or other component due to water, weather damage, long periods of dampness, condensation, damaging chemicals or cleaners will not be the responsibility of NAPOLEON®.

The bill of sale or copy will be required together with a serial number and a model number when making any warranty claims from your authorized dealer. The warranty registration card must be returned within fourteen days to register the warranty.

NAPOLEON® reserves the right to have its representative inspect any product or part thereof prior to honouring any warranty claim.
Maximum inlet gas pressure is 7" water column for natural gas and 13" water column for propane. Manifold pressure under flow conditions is 3.5" water column for natural gas and 10" water column for propane.

This fireplace is approved for bathroom, bedroom and bed-sitting room installations and is suitable for mobile home installation. No external electricity (110 volts or 24 volts) is required for the gas system operation.

Expansion / contraction noises during heating up and cooling down cycles are normal and are to be expected.

Use only accessories designed for and listed with your specific fireplace. Provide adequate ventilation air. Provide adequate accessibility for servicing and operating the fireplace. Never obstruct the front opening of the fireplace.

Objects placed in front of the fireplace must be kept a minimum of 48" away from the front face of the unit.

Do not use abrasive cleaners to clean plated parts. Buff lightly with a clean dry cloth. The BGD36CF(G) and BGD42CF are factory equipped with tempered glass. The glass thickness is 3/16" for both models. Use only replacement glass available from your Napoleon® dealer. DO NOT SUBSTITUTE MATERIALS. Clean the glass after the first 10 hours of operation with a recommended gas fireplace glass cleaner. Thereafter clean as required. DO NOT CLEAN GLASS WHEN HOT! If the glass is not kept clean permanent discoloration and / or blemishes may result.

Use only accessories designed for and listed with your specific fireplace.

Provide adequate ventilation air. Provide adequate accessibility for servicing and operating the fireplace. Never obstruct the front opening of the fireplace.

UNIT DIMENSIONS

BGD36CF(G)  BGD42CF

FIGURE 1  FIGURE 2  FIGURE 4  FIGURE 5

FIGURE 3  FIGURE 6

UNIT DIMENSIONS

INSTALLATION OVERVIEW

See the section “MINIMUM MANTEL AND ENCLOSURE CLEARANCES”

See the sections “MINIMUM ENCLOSURE CLEARANCES” for drywall (or other combustible material)

See the sections “MINIMUM ENCLOSURE CLEARANCES” for non-combustible material

See the section “INSTALLATION-FRAMING”

See the section “VENTING” and “INSTALLATION”

See the section “FRAMING”
VENTING

THE BGD36CF(G) USES: 4" EXHAUST / 7" AIR INTAKE VENT PIPE
THE BGD42CF USES: 5" EXHAUST / 8" AIR INTAKE VENT PIPE
MODEL BGD36CF MAY BE VENTED EITHER AS A TOP VENT OR A REAR VENT.
REFER TO THE SECTION APPLICABLE TO YOUR INSTALLATION.

For safe and proper operation of the fireplace follow the venting instruction exactly. Deviation from the minimum vertical vent length can create difficulty in burner start-up and/or carboning. Provide a means for visually checking the vent connection to the fireplace after the fireplace is installed. Vent lengths that pass through unheated spaces (attics, garages, crawl spaces) should be insulated with the insulation wrapped in a protective sleeve to minimize condensation.

VENTING LENGTHS

Use only Wolf Steel, Simpson Dura-Vent, Selkirk Direct Temp or American Metal Amerivent venting components. Minimum and maximum vent lengths, for both horizontal and vertical installations, and air terminal locations for either system are set out in this manual and must be adhered to. For Simpson Dura-Vent, Selkirk Direct Temp and American Metal Amerivent, follow the installation procedure provided with the venting components.

A starter adapter must be used with the following vent systems and may be purchased from the corresponding supplier:

<table>
<thead>
<tr>
<th>PART</th>
<th>4&quot;/7&quot;</th>
<th>5&quot;/8&quot;</th>
<th>SUPPLIER</th>

<td>5DSC-N</td>
<td>American Metal</td>
<td></td>
</tr>
</tbody>
</table>

For vent systems that provide seals on the inner exhaust flue, only the outer air intake joints must be sealed using a red high temperature silicone (RTV). This same sealant may be used on both the inner exhaust and outer intake vent pipe joints of all other approved vent systems except for the exhaust vent pipe connection to the fireplace flue collar which must be sealed using the black high temperature sealant Mill Pac.

**BGD36CF(G)**

When using Wolf Steel venting components, use only approved Wolf Steel rigid / flexible components with the following termination kits: WALL TERMINAL KIT GD222, or 1/12 to 7/12 PITCH ROOF TERMINAL KIT GD110, 8/12 to 1/12 ROOF TERMINAL KIT GD111, FLAT ROOF TERMINAL KIT GD012 or PERISCOPE KIT GD011 (for wall penetration below grade). With flexible venting, in conjunction with the various terminations, use either the 5 FOOT VENT KIT GD220 or the 10 FOOT VENT KIT GD330.

**BGD42CF**

When using Wolf Steel venting components, use only approved Wolf Steel flexible components with the following termination kits: WALL TERMINAL KIT GD422, or 1/12 to 7/12 PITCH ROOF TERMINAL KIT GD410, 8/12 to 1/12 ROOF TERMINAL KIT GD411, FLAT ROOF TERMINAL KIT GD412 or PERISCOPE KIT GD401 (for wall penetration below grade). With flexible venting, in conjunction with the various terminations, use either the 5 FOOT VENT KIT GD420 or the 10 FOOT VENT KIT GD430.

**Required Rise on Horizontal Venting**

For optimum performance, it is recommended that all horizontal runs have a 1" rise per foot.

**HG36CF(G)**

**HORIZONTAL VENT SECTIONS:** A minimum clearance of 1" at the bottom and sides of the vent and 2" at the top on all horizontal runs to combustibles is required. The firestop spacer (W010-1774) supplied with the unit must be used to maintain this clearance.

**VERTICAL VENT SECTIONS:** A minimum of 1" all around the vent pipe on all vertical runs to combustibles is required except for clearances in fireplace enclosures. See "MINIMUM ENCLOSURE CLEARANCES" section. Use firestop spacer W500-0096 (not supplied).

**BGD42CF**

**HORIZONTAL VENT SECTIONS:** A minimum clearance of 2" all around the vent pipe on all horizontal runs to combustibles is required. Use firestop spacer W010-1778 (supplied).

**VERTICAL VENT SECTIONS:** A minimum of 1" all around the vent pipe on all vertical runs to combustibles is required. Use firestop spacer W500-0028 (not supplied).

</tbody>
</table>

* Recommended to prevent condensation on windows and thermal breakage.
** It is recommended to use a heat shield and to maximize the distance to vinyl clad soffits.
*** The periscope kits GD-201 and GD401 requires a minimum 18 inches clearance from an inside corner.
**** This is a recommended distance. For additional requirements check local codes.
† 3 feet above if within 10 feet horizontally.
‡ A vent shall not terminate directly above a sidewalk or paved driveway that is located between two single family dwellings and serves both dwellings.
†† Permitted only if the veranda, porch, or deck is fully open on a minimum of two sides beneath the floor.
†* Recommended to prevent recirculation of exhaust products. For additional requirements check local codes.
For optimum performance, it is recommended that all horizontal runs have a 1" rise per foot. When terminating vertically, the vertical rise is a minimum 3 feet and a maximum 40 feet from the centre of the fireplace flue outlet.

NOTE: When terminating vertically, the restrictor plate W500-0205 must be installed. Refer to Restricting Vertical Vents.
SPECIAL VENT INSTALLATIONS

**PERISCOPE TERMINATION**

Use the GD201 periscope kit to locate the air termination above grade. The periscope must be installed so that when final grading is completed, the bottom air slot is located a minimum of 12" above grade. The maximum allowable vent length is 10'.

**CORNER TERMINATION**

The maximum vent length for a corner installation is 20" of horizontal run, in addition to the 45° offset. In this case zero rise is acceptable when using rigid. See FIGURE 18. Flexible venting must maintain a 6" rise. See FIGURE 19.

**FIGURE 15**

**FIGURE 16**

**FIGURE 17**

**FIGURE 18**

**FIGURE 19**
VENTING APPLICATION FLOW CHART

**BGD36CF(G)**

**FIREPLACE VENT EXIT**

**REAR EXIT**

- **Horizontal Termination**
  - Vertical rise is equal to or greater than the horizontal run
  - Horizontal run + vertical rise to maximum of 40 feet
  - 3.5 times the vertical rise equal to or greater than the horizontal run

- **Vertical Termination**
  - Vertical rise is less than the horizontal run
  - Vertical run + vertical rise to maximum of 24.75 feet
  - 4.2 times the vertical rise equal to or greater than the horizontal run

**TOP EXIT**

- **Horizontal Termination**
  - Vertical rise is equal to or greater than the horizontal run
  - Horizontal run + vertical rise to maximum of 40 feet
  - 3 times The vertical rise equal to or greater than the horizontal run

- **Vertical Termination**
  - Vertical rise is less than the horizontal run
  - Vertical run + vertical rise to maximum of 24.75 feet
  - 4.2 times the vertical rise equal to or greater than the horizontal run

**BGD42CF**

**HORIZONTAL TERMINATION**

- Vertical rise is equal to or greater than the horizontal run
  - Horizontal run + vertical rise to maximum of 40 feet
  - 4.2 times the vertical rise equal to or greater than the horizontal run

**VERTICAL TERMINATION**

- Vertical rise is less than the horizontal run
  - Vertical run + vertical rise to maximum of 24.75 feet
  - 3 times The vertical rise equal to or greater than the horizontal run
when \((H_T) \leq (V_T)\)

Simple venting configuration (only one 90° elbow)

See graph to determine the required vertical rise \(V_T\) for the required horizontal run \(H_T\).

For vent configurations requiring more than one 90° elbow, the following formulas apply:

**FORMULA 1:**  \(H_T \leq V_T\)

**FORMULA 2:**  \(H_T + V_T \leq 40\) feet

**Example 1:**

\[
\begin{align*}
V_1 &= 3\text{ ft} \\
V_2 &= 8\text{ ft} \\
V_T &= V_1 + V_2 = 3 + 8 = 11\text{ ft} \\
H_T &= 2.5\text{ ft} \\
H_1 &= 2\text{ ft} \\
H_2 &= H_T + H_1 = 2.5 + 2 = 4.5\text{ ft} \\
H_0 &= 0.03\text{ (three 90° elbows - 90°)} = 0.03\times(270° - 90°) = 5.4\text{ ft} \\
H_T &= H_1 + H_0 = 4.5 + 5.4 = 9.9\text{ ft} \\
H_T + V_T &= 9.9 + 11 = 20.9\text{ ft} \\
\end{align*}
\]

**Formula 1:**  \(H_T \leq V_T\)

9.9 \leq 11

**Formula 2:**  \(H_T + V_T \leq 40\) feet

20.9 \leq 40

Since both formulas are met, this vent configuration is acceptable.
For vent configurations requiring more than one 90° elbow the following formulas apply:

**Formula 1:**
\[ \text{HT} < 4.2 \text{ VT} \]

**Example 2:**
- \( V_1 = 4 \text{ ft} \)
- \( V_2 = 1.5 \text{ ft} \)
- \( V_T = V_1 + V_2 = 4 + 1.5 = 5.5 \text{ ft} \)
- \( H_1 = 2 \text{ ft} \)
- \( H_2 = 1 \text{ ft} \)
- \( H_3 = 1 \text{ ft} \)
- \( H_4 = 1.5 \text{ ft} \)
- \( H_R = H_1 + H_2 + H_3 + H_4 = 2 + 1 + 1 + 1.5 = 5.5 \text{ ft} \)
- \( H_o = 0.03 \text{ (four 90° elbows - 90°) = 0.03(360° - 90°) = 8.1 ft} \)
- \( H_T = H_R + H_o = 5.5 + 8.1 = 13.6 \text{ ft} \)
- \( H_T + V_T = 13.6 + 5.5 = 19.1 \text{ ft} \)

**Formula 1:**
\[ 4.2 \times V_T = 4.2 \times 5.5 = 23.1 \text{ ft} \]
\[ 13.6 \leq 23.1 \]

**Formula 2:**
\[ H_T + V_T \leq 24.75 \text{ feet} \]
\[ 19.1 \leq 24.75 \]

Since both formulas are met, this vent configuration is acceptable.

---

**BGD36CF(G) TOP EXIT / HORIZONTAL TERMINATION**

*when \( (H_t) > (V_t) \)*

Simple venting configuration (only one 90° elbow)

See graph to determine the required vertical rise \( V_T \) for the required horizontal run \( H_T \).

**Figure 23**

**Example 3:**
- \( V_1 = 4 \text{ ft} \)
- \( V_2 = 1.5 \text{ ft} \)
- \( V_T = V_1 + V_2 = 4 + 1.5 = 5.5 \text{ ft} \)
- \( H_1 = 2 \text{ ft} \)
- \( H_2 = 1 \text{ ft} \)
- \( H_3 = 1 \text{ ft} \)
- \( H_4 = 1.5 \text{ ft} \)
- \( H_R = H_1 + H_2 + H_3 + H_4 = 2 + 1 + 1 + 1.5 = 5.5 \text{ ft} \)
- \( H_o = 0.03 \text{ (four 90° elbows - 90°) = 0.03(360° - 90°) = 8.1 ft} \)
- \( H_T = H_R + H_o = 5.5 + 8.1 = 13.6 \text{ ft} \)
- \( H_T + V_T = 13.6 + 5.5 = 19.1 \text{ ft} \)

**Formula 1:**
\[ H_T \leq 4.2 \times V_T \]
\[ 4.2 \times V_T = 4.2 \times 5.5 = 23.1 \text{ ft} \]
\[ 13.6 \leq 23.1 \]

**Formula 2:**
\[ H_T + V_T \leq 24.75 \text{ feet} \]
\[ 19.1 \leq 24.75 \]

Since both formulas are met, this vent configuration is acceptable.
BGD36CF(G) REAR EXIT / HORIZONTAL TERMINATION

when \( H_r \leq V_r \)
Simple venting configuration (only two 90° elbows)

**FIGURE 25**

See graph to determine the required vertical rise \( V_r \) for the required horizontal run \( H_r \).

**REQUIRED VERTICAL RISE IN FEET \( V_r \)**

HORIZONTAL VENT RUN PLUS OFFSETS IN FEET \( H_r \)

*The shaded area within the lines represents acceptable values for \( H_r \) and \( V_r \).*

For vent configurations requiring more than two 90° elbows the following formulas apply:
Formula 1: \( H_r \leq V_r \)
Formula 2: \( H_r + V_r \leq 40 \) feet

**Example 4:**
\[ V_1 = 9 \text{ ft} \]
\[ V_2 = 6 \text{ ft} \]
\[ V_r = V_1 + V_2 = 9 + 6 = 15 \text{ ft} \]
\[ H_1 = 3 \text{ ft} \]
\[ H_2 = 2 \text{ ft} \]
\[ H_3 = 1.5 \text{ ft} \]
\[ H_4 = H_1 + H_2 + H_3 = 3 + 2 + 1.5 = 6.5 \text{ ft} \]
\[ H_r = H_4 + H_o = .03 \text{ (four 90° elbows - 90°)} \]
\[ = .03(90 + 90 + 90 - 90) = 8.1 \text{ ft} \]
\[ H_r = H_4 + H_o = 6.5 + 8.1 = 14.6 \text{ ft} \]
\[ H_r + V_r = 14.6 + 15 = 29.6 \text{ ft} \]

Formula 1: \( H_r \leq V_r \)
\[ 14.6 \leq 15 \]

Formula 2: \( H_r + V_r \leq 40 \) feet
\[ 29.6 \leq 40 \]

Since both formulas are met, this vent configuration is acceptable.

when \( H_r > V_r \)
Simple venting configuration (only two 90° elbows)

**FIGURE 27**

See graph to determine the required vertical rise \( V_r \) for the required horizontal run \( H_r \).

**REQUIRED VERTICAL RISE IN INCHES \( V_r \)**

HORIZONTAL VENT RUN PLUS OFFSETS IN FEET \( H_r \)

*The shaded area within the lines represents acceptable values for \( H_r \) and \( V_r \).*

For vent configurations requiring more than two 90° elbows the following formulas apply:
Formula 1: \( H_r \leq 3.5V_r \)
Formula 2: \( H_r + V_r \leq 24.75 \) feet

**Example 5:**
\[ V_1 = 4 \text{ ft} \]
\[ V_2 = 1.5 \text{ ft} \]
\[ V_r = V_1 + V_2 = 4 + 1.5 = 5.5 \text{ ft} \]
\[ H_1 = 2 \text{ ft} \]
\[ H_2 = 1 \text{ ft} \]
\[ H_3 = 1.5 \text{ ft} \]
\[ H_4 = H_1 + H_2 + H_3 + H_4 = 2 + 1 + 1 + 1.5 = 5.5 \text{ ft} \]
\[ H_r = H_4 + H_o = .03 \text{ (four 90° elbows + one 45° elbow - 90°)} \]
\[ = .03(90 + 90 + 90 + 45 - 90) = 9.45 \text{ ft} \]
\[ H_r = H_4 + H_o = 5.5 + 9.45 = 14.95 \text{ ft} \]
\[ H_r + V_r = 14.95 + 5.5 = 20.45 \text{ ft} \]

Formula 1: \( H_r \leq 3.5V_r \)
\[ 3.5 \times 5.5 = 19.25 \text{ ft} \]
\[ 14.95 < 19.25 \]

Formula 2: \( H_r + V_r \leq 24.75 \) feet
\[ 20.45 \leq 24.75 \]

Since both formulas are met, this vent configuration is acceptable.
BGC36CF(G) TOP OR REAR EXIT VERTICAL TERMINATION

when \( (H_r) \leq (V_r) \)

Simple venting configuration (only two 90° elbows)

\[ V_1 = 5 \text{ ft} \]
\[ V_2 = 10 \text{ ft} \]
\[ V_r = V_1 + V_2 = 5 + 10 = 15 \text{ ft} \]
\[ H_r = 3 \text{ ft} \]
\[ H_1 = 2.5 \text{ ft} \]
\[ H_2 = H_1 + H_r = 3 + 2.5 = 5.5 \text{ ft} \]
\[ H_o = .03 (\text{three } 90° \text{ elbows - } 90°) \]
\[ = .03(90 + 90 + 90 - 90) = 5.4 \text{ ft} \]
\[ H_r + V_r = 5.5 + 5.4 = 10.9 \text{ ft} \]
\[ H_r + V_r = 10.9 + 15 = 25.9 \text{ ft} \]

Formula 1: \( H_r \leq V_r \)

10.9 \leq 15

Formula 2: \( H_r + V_r \leq 40 \text{ feet} \)

25.9 \leq 40

Since both formulas are met, this vent configuration is acceptable.

when \( (H_r) > (V_r) \)

Simple venting configurations

\[ V_1 = 2 \text{ ft} \]
\[ V_2 = 1 \text{ ft} \]
\[ V_3 = 1.5 \text{ ft} \]
\[ V_r = V_1 + V_2 + V_3 = 2 + 1 + 1.5 = 4.5 \text{ ft} \]
\[ H_1 = 6 \text{ ft} \]
\[ H_2 = 2 \text{ ft} \]
\[ H_o = H_1 + H_2 = 6 + 2 = 8 \text{ ft} \]
\[ H_o = .03 (\text{four } 90° \text{ elbows - } 90°) \]
\[ = .03(90 + 90 + 90 + 90 - 90) = 8.1 \text{ ft} \]
\[ H_r + V_1 = 16.1 + 4.5 = 20.6 \text{ ft} \]

Formula 1: \( H_r \leq 3V_r \)

Since this formula is not met, this vent configuration is unacceptable.

Formula 2: \( H_r + V_r \leq 40 \text{ feet} \)

20.6 \leq 40

Since only formula 2 is met, this vent configuration is unacceptable and a new fireplace location or vent configuration will need to be established to satisfy both formulas.
BGD36CF(G) TOP OR REAR EXIT VERTICAL TERMINATION

Example 8:

\[ V_1 = 1.5 \text{ ft} \]
\[ V_2 = 5 \text{ ft} \]
\[ V_T = V_1 + V_2 = 1.5 + 5 = 6.5 \text{ ft} \]
\[ H_1 = 1 \text{ ft} \]
\[ H_2 = 1 \text{ ft} \]
\[ H_3 = 10.75 \text{ ft} \]
\[ H_R = H_1 + H_2 + H_3 = 1 + 1 + 10.75 = 12.75 \text{ ft} \]
\[ H_o = 0.03 (\text{three 90° elbows + one 45° elbow - 90°}) \]
\[ = 0.03 (90 + 90 + 90 + 45 - 90) = 6.75 \text{ ft} \]
\[ H_T = H_R + H_o = 12.75 + 6.75 = 19.5 \text{ ft} \]
\[ H_T + V_T = 19.5 + 6.5 = 26 \text{ ft} \]

Formula 1:
\[ H_T \leq 3V_T \]
\[ 3V_T = 3 \times 6.5 = 19.5 \text{ ft} \]
\[ 19.5 \leq 19.5 \]

Formula 2:
\[ H_T + V_T \leq 40 \text{ feet} \]
\[ 26 \leq 40 \]

Since both formulas are met, this vent configuration is acceptable.
**BDG42CF HORIZONTAL TERMINATION**

- **When** \( H_T \leq V_T \)
  - Simple venting configuration (only one 45° and 90° elbow)

- **When** \( H_T > V_T \)
  - Simple venting configuration (only one 45° and 90° elbow)

### Example 1:

- \( V_T = 8 \) ft
- \( H_1 = 2.5 \) ft
- \( H_2 = 2 \) ft
- \( H_R = H_1 + H_2 = 2.5 + 2 = 4.5 \) ft
- \( H_T = H_R + H_O = 4.5 + 2.7 = 7.2 \) ft
- \( V_T + V_1 = 8 + 2 = 10 \) ft
- \( H_T < V_T \)
- \( H_T + V_T < 40 \) feet

Since both formulas are met, this vent configuration is acceptable.

### Example 2:

- \( V_1 = 4 \) ft
- \( V_2 = 1.5 \) ft
- \( V_T = V_1 + V_2 = 4 + 1.5 = 5.5 \) ft
- \( H_1 = 2 \) ft
- \( H_2 = 1 \) ft
- \( H_3 = 1 \) ft
- \( H_4 = 1.5 \) ft
- \( H_R = H_1 + H_2 + H_3 + H_4 = 2 + 1 + 1 + 1.5 = 5.5 \) ft
- \( H_T = H_R + H_O = 5.5 + 8.1 = 13.6 \) ft
- \( H_T + V_T = 13.6 + 5.5 = 19.1 \) ft

- **Formula 1:** \( H_T < 4.2V_T \)
  - \( 4.2V_T = 4.2 \times 5.5 = 23.1 \) ft
  - \( H_T < 23.1 \)
  - \( 13.6 \leq 16.8 \)

- **Formula 2:** \( H_T + V_T < 24.75 \) feet
  - \( 19.1 \leq 24.75 \)

Since both formulas are met, this vent configuration is acceptable.
BGD42CF VERTICAL TERMINATION

when \((H_T) < (V_T)\)

Simple venting configurations

See graph to determine the required vertical rise \(V_T\) for the required horizontal run \(H_T\).

The shaded area within the lines represents acceptable values for \(H_T\) and \(V_T\).

For vent configurations requiring more than one 45° and one 90° elbow the following formulas apply:

Formula 1: \(H_T \leq V_T\)
Formula 2: \(H_T + V_T \leq 40\) feet

Example 3:

\[
\begin{align*}
V_1 &= 5 \text{ ft} \\
V_2 &= 10 \text{ ft} \\
V_T &= V_1 + V_2 = 5 + 10 = 15 \text{ ft} \\
H_1 &= 3 \text{ ft} \\
H_2 &= 2.5 \text{ ft} \\
H_R &= H_1 + H_2 = 3 + 2.5 = 5.5 \text{ ft} \\
H_o &= .03 \text{ (one 45° elbow + three 90° elbows - 135°)} \\
&= .03 (45 + 90 + 90 + 90 - 135) = 5.4 \text{ ft} \\
H_T &= H_R + H_o = 5.5 + 5.4 = 10.9 \text{ ft} \\
H_T + V_T &= 10.9 + 15 = 25.9 \text{ ft} \\
\end{align*}
\]

Formula 1:
\[H_T \leq V_T\]
\[10.9 \leq 15\]

Formula 2:
\[H_T + V_T \leq 40\] feet
\[25.9 \leq 40\]

Since both formulas are met, this vent configuration is acceptable.
GD42CF VERTICAL TERMINATION

when \((H_T) > (V_T)\)

Simple venting configurations

\[ V_T = 1 \text{ ft} \]
\[ V_T = 1.5 \text{ ft} \]
\[ H_T = V_T + V_T = 1 + 1.5 = 2.5 \text{ ft} \]
\[ H_1 = 6 \text{ ft} \]
\[ H_2 = 2 \text{ ft} \]
\[ H_T = H_1 + H_2 = 6 + 2 = 8 \text{ ft} \]
\[ H_T = .03 \text{ (one 45° elbow + three 90° elbows - 135°)} \]
\[ = .03 (45 + 90 + 90 + 90 - 135) = 5.4 \text{ ft} \]
\[ H_T = V_T + 90 = 8 + 5.4 = 13.4 \text{ ft} \]
\[ H_T + V_T = 13.4 + 2.5 = 15.9 \text{ ft} \]

Formula 1: \[ H_T \leq 3V_T \]
\[ 3V_T = 3 \times 2.5 = 7.5 \text{ ft} \]
\[ 13.4 \leq 7.5 \]

Since this formula is not met, this vent configuration is unacceptable.

Formula 2: \[ H_T + V_T \leq 40 \text{ feet} \]
\[ 15.9 \leq 40 \]

Since only formula 2 is met, this vent configuration is unacceptable and a new fireplace location or vent configuration will need to be established to satisfy both formulas.

**Example 5:**

See graph to determine the required vertical rise \(V_T\) for the required horizontal run \(H_T\).

The shaded area within the lines represents acceptable values for \(H_T\) and \(V_T\).

For vent configurations requiring more than one 45° and one 90° elbow the following formulas apply:

**Formula 1:** \[ H_T \leq 3V_T \]

**Formula 2:** \[ H_T + V_T \leq 40 \text{ feet} \]

**Example 4:**

**FIGURE 40**

**FIGURE 41**

**FIGURE 42**
**BGD36CF(G) PRE-INSTALLATION PREPARATION**

(This procedure is not required for the BGD42CF)

For optimum performance, it is recommended that all horizontal runs have a 1” rise per foot.

**REMOVING THE VALVE ACCESS DOOR**

1. The valve access door rotates on the pins attached to the side frame. Lift the valve access door off the pins to operate the main glass door.

**FIGURE 43**

**DOOR OPERATION**

To access the lower door latch, open the Valve Access Door as illustrated. Release the top and bottom door latches, located at the right side of the door.

**FIGURE 44**

Before attaching elbows to the collars on the back of the fireplace, 1 1/4” will need to be trimmed off the 4” collar.

From inside the firebox, insert the 4” flue pipe / gasket assembly (provided) through the rear of the firebox.

Secure the gasket assembly to the rear and top of the unit using 4 #8 x 3/4” Hex Head Wildrill screws supplied.

**WARNING**

FAILURE TO INSTALL THE CAP WILL CAUSE THE FIREPLACE TO FUNCTION IMPROPERLY AND CAN CAUSE INJURY OR PROPERTY DAMAGE.

1. Remove the 7” diameter cap from the top of the fireplace and re-secure it over the 7” collar located at the rear of the unit. Press firmly on the cap while securing to ensure an airtight seal. Do not damage the gasket.

2. Remove the plate covering the 4” diameter flue opening (seen inside the top of the 7” diameter collar) and discard. Try not to disturb the retaining ring or the gasket beneath. Re-secure the ring and gasket using the screws removed from the plate.

3. From inside the firebox, insert the 4” flue pipe assembly through the heat shield and out through the retaining ring. Secure the assembly to the rear and top of the unit using 4 #8 x 3/4” Hex Head Wildrill screws supplied. Do not over tighten. The gasket needs only to be snug against the firebox. **FIGURE 46**

**INSTALLATION**

**WALL AND CEILING PROTECTION**

**BGD36CF(G)**

**HORIZONTAL VENT SECTIONS**: A minimum clearance of 1” at the bottom and sides of the vent and 2” at the top on all horizontal runs to combustibles is required. The firestop spacer (W010-1774) supplied with the unit must be used to maintain this clearance.

**VERTICAL VENT SECTIONS**: A minimum of 1” all around the vent pipe on all vertical runs to combustibles is required except for clearances in fireplace enclosures. See "MINIMUM ENCLOSURE CLEARANCES" section. Use firestop spacer W500-0096 (not supplied).

**BGD42CF**

**HORIZONTAL VENT SECTIONS**: A minimum clearance of 2” all around the vent pipe on all horizontal runs to combustibles is required. Use firestop spacer W010-1778 (supplied).

**VERTICAL VENT SECTIONS**: A minimum of 1” all around the vent pipe on all vertical runs to combustibles is required. Use firestop spacer W500-0028 (not supplied).

**HORIZONTAL INSTALLATION**

**BGD36CF(G)**

**FIGURE 47**

**BGD42CF**

**FIGURE 47**

This application occurs when venting through an exterior wall.

Having determined the correct height for the air terminal location, cut and frame a hole in the exterior wall 9 7/8” wide by 11 3/8” high to accommodate the firestop assembly. Dry fit the firestop assembly before proceeding to ensure the brackets on the rear surface fit within the horizontal framing.

As an alternative to framing, the vent pipe can be enclosed in the wall using Napoleon® vent sleeve VS47KT.

**NOTE**: THE FIRESTOP ASSEMBLY MUST BE INSTALLED WITH THE VENT SHIELD TO THE TOP.

The length of the vent shield may be cut shorter for combustible walls that are less than 8 1/2” thick but the vent shield must extend the full depth of the combustible wall.

1. Apply a bead of caulking (not supplied) around the outer edge of the inside surface of the firestop assembly, fit the firestop assembly to the hole and secure using the 4 screws (W415-0026) supplied in your manual baggy.

2. Once the vent pipe is installed in its final position, apply high temperature sealant W573-0002 (not supplied) between the pipe, and the firestop.

**NOTE**: DO NOT FILL THE CAVITY BETWEEN THE VENT PIPE AND THE FIRESTOP SLEEVE WITH ANY TYPE OF MATERIAL.
Apply a bead of caulking all around the edge of the opening and place the firestop top, so that the vent shield covers the top of the vent within the opening. The length of the vent shield may be cut shorter for combustible walls that are less than 8 1/2" thick but the vent shield must extend the full depth of the combustible wall. Place the firestop bottom against the firestop top and secure the two together. Adjust the assembly to ensure it is tight to the vent. Secure firestop to wall. Ensure that both spacer and shield maintain the required clearance to combustibles. Once the vent pipe is installed in its final position, apply sealant between the vent pipe and the firestop spacer. This restricts cold air from being drawn into the room or around the fireplace. See Figures 49a-c.

Where the opening in the outside wall has been cut 13" tall to provide 2" clearance from the vent pipe, terminal extension plate W500-0206 must be used to cover the opening.

### VERTICAL INSTALLATION

1. Determine the air terminal location, cut and frame 9 3/4" for the BGD36CF(G), or 10 3/4" for the BGD42CF square opening in the ceiling and an opening in the roof to provide the minimum 1" clearance between the fireplace vent pipe and any combustible material. Try to center the exhaust pipe location midway between two joists to prevent having to cut them. Use a plumb bob to line up the center of the openings.

DO NOT FILL THIS SPACE WITH ANY TYPE OF MATERIAL.

A vent pipe shield will prevent any materials such as insulation, from filling up the 1" air space around the pipe. Nail headers between the joist for extra support.

2. Apply a bead of caulking (not supplied) to the framework or to the Wolf Steel vent pipe shield plate or equivalent (in the case of a finished ceiling), and secure over the opening in the ceiling. A firestop must be placed on the bottom of each framed opening in a roof or ceiling that the venting system passes through. Apply a bead of caulking all around and place a firestop spacer over the vent shield to restrict cold air from being drawn into the room or around the fireplace. Ensure that both spacer and shield maintain the required clearance to combustibles. Once the vent pipe is installed in its final position, apply high temperature sealant W573-0002 (not supplied) between the vent pipe and the firestop spacer.

3. In the attic, slide the vent pipe collar down to cover up the open end of the shield and tighten. This will prevent any materials, such as insulation, from filling up the 1" air space around the pipe.
USING FLEXIBLE VENT COMPONENTS

THE BGD36CF(G) USES: 4" EXHAUST / 7" AIR INTAKE VENT PIPE WITH A MINIMUM 6" BEND RADIUS
THE BGD42CF USES: 5" EXHAUST / 8" AIR INTAKE VENT PIPE WITH A MINIMUM 8" BEND RADIUS

**WARNING**

Do not allow the inside liner to bunch up on horizontal or vertical runs and elbows. Keep it pulled tight. A 1 1/4" air gap between the inner and outer flexible vent pipe all around is required for safe operation. A spacer is required at the start, middle and end of each elbow to ensure this gap is maintained. See Figure 53. Spacers are attached to the inner flex liner at predetermined intervals to maintain a 1 1/4" air gap to the outer flex liner. These spacers must not be removed.

**FIGURE 53**

For safe and proper operation of the fireplace, follow the venting instructions exactly. All inner exhaust and outer intake vent pipe joints may be sealed using either high temperature sealant W573-0002 or high temperature Mill Pac W573-0007 with the exception of the fireplace exhaust flue collar which must be sealed using Mill Pac (not supplied).

**HORIZONTAL AIR TERMINAL INSTALLATION**

1. Stretch the exhaust vent pipe to the required length taking into account the additional length needed for the finished wall surface. Slip the vent pipe a minimum of 2" over the inner sleeve of the air terminal and secure with 3 #8 screws. Apply a heavy bead of the high temperature sealant W573-0002 (not supplied).
2. Using the air intake vent pipe, slide over the outer combustion air sleeve of the air terminal and secure with 3 #8 screws. Seal as before.
3. Insert the flexible vent pipe through the firestop maintaining the required clearance to combustibles. Holding the air terminal (lettering in an upright, readable position), secure to the exterior wall and make weather tight by sealing with caulking (not supplied).
4. Apply a heavy bead of high temperature sealant W573-0007 (not supplied) to the outside of the 4" inner collar of the fireplace approximately 1" from the end. Slide the flexible vent pipe a minimum of 2" over the vent pipe collar and secure with 3 #8 screws.
5. Using the air intake vent pipe, slide over the fireplace combustion air collar and secure with 3 #8 screws. Seal with high temperature sealant W573-0002 (not supplied).
6. If more flexible vent pipe needs to be used to reach the fireplace, couple them together as illustrated in Figure 59. The vent system must be supported approximately every 3 feet for both vertical and horizontal runs. Use noncombustible strapping to maintain a clearance to combustibles of 1".
7. **BDG42CF ONLY**: The vent heat shield must be installed only when terminating horizontally with no vertical rise. Remove the two screws nearest the vent collars on the top of the fireplace. Align the vent heat shield (supplied) and secure. Adjust the vent heat shield to touch the firestop spacer.

**FIGURE 54**

**FIGURE 55**

**FIGURE 56**

1. Fasten the roof support to the roof using the screws provided. The roof support is optional. In this case the venting is to be adequately supported using either an alternate method suitable to the authority having jurisdiction or the optional roof support.
2. Stretch the exhaust vent pipe to the required length, slip it a minimum of 2" over the inner sleeve of the air terminal connector and secure with 3 #8 screws. Seal using a heavy bead of the high temperature sealant W573-0002 (not supplied).
3. Repeat using air intake vent pipe.
4. Thread the air terminal pipe assembly down through the roof. The air terminal must be located vertically and plumb. Attach the air terminal assembly to the roof support, ensuring that a minimum 16" of air terminal will penetrate the roof when fastened.

**DO NOT CLAMP THE FLEXIBLE VENT PIPE.**

5. Remove nails from the shingles, above and to the sides of the chimney. Place the flashing over the air terminal and slide it underneath the sides and upper edge of the shingles. Ensure that the air terminal is properly centred within the flashing, giving a 3/4" margin all around. Fasten to the roof. Do not nail through the lower portion of the flashing. Make weather-tight by sealing with caulking. Where possible, cover the sides and top edges of the flashing with roofing material.
6. Aligning the seams of the terminal and air terminal connector, place the terminal over the air terminal connector making sure the inner pipe goes into the hole in the terminal. Secure with screws provided.
7. Apply a heavy bead of weatherproof caulking 2" above the flashing. Note: Maintain a minimum of 2" space between the air inlet base and the storm collar. Install the storm collar around the air terminal and slide down to the caulking. Tighten to ensure that a weather-tight seal between the air terminal and the collar is achieved.
8. If more vent pipe needs to be used to reach the fireplace, couple them together as illustrated. The vent system must be supported approximately every 3 feet for both vertical and horizontal runs. Use noncombustible strapping to maintain a clearance to combustibles of 1".

**FIGURE 57**

**FIGURE 58**

**FIGURE 59**

"Wolf Steel Approved Venting" as identified by the stamp only on the 7" outer vent pipe.
USING RIGID VENT COMPONENTS

1. HORIZONTAL AIR TERMINAL INSTALLATION
   1. Move the fireplace into position. Measure the vent length required between terminal and fireplace taking into account the additional length needed for the finished wall surface and any 1½" overlaps between venting components.
   2. Apply high temperature sealant W573-0007 (not supplied) to the outer edge of the vent pipe shield. Attach the first vent component and secure using 3 self tapping screws. Repeat using air intake vent pipe and seal using high temperature sealant W573-0002 (not supplied).
   3. Holding the air terminal (lettering in an upright, readable position), insert into both vent pipes with a twisting motion to ensure that both the terminal sleeves engage into the vent pipes and sealant. Secure the terminal to the exterior wall or siding by sealing with caulking (not supplied).

   The air terminal mounting plate may be recessed into the exterior wall or siding by 1½", the depth of the return flange.

   The air terminal is properly centered within the flashing, giving a 1½" overlap. Fasten to the roof. Do NOT nail through the lower portion of the flashing. Make weather-tight by sealing with caulking. Where possible, cover the sides and top edges of the flashing with roofing material.

   Ensure that all exhaust venting and elbows have sufficient vent spacers attached and each component is securely fastened to the roof. Attach the exhaust telescopic sleeve to the vent run. Repeat using an air intake vent pipe telescopic sleeve. Secure and seal as before. To facilitate completion, attach exhaust and air intake vent pipe couplers to the air terminal. Install the air terminal. See item 3 of the Horizontal Air Terminal Installation. Extend the exhaust telescopic sleeve; connect to the air terminal assembly. Fasten with self tapping screws and seal. Repeat using the air intake vent pipe telescopic sleeve.

2. EXTENDED HORIZONTAL AND CORNER AIR TERMINAL INSTALLATION
   1. Follow the instructions for “Horizontal Air Terminal Installations”, items 1 to 3.
   2. Continue adding components alternating inner and outer venting. Ensure that all exhaust venting and elbows have sufficient vent spacers attached and each component is securely fastened to the roof. Attach the exhaust telescopic sleeve to the vent run. Repeat using an air intake vent pipe telescopic sleeve. Secure and seal as before. To facilitate completion, attach exhaust and air intake vent pipe couplers to the air terminal. Install the air terminal. See item 3 of the Horizontal Air Terminal Installation. Extend the exhaust telescopic sleeve; connect to the air terminal assembly. Fasten with self tapping screws and seal. Repeat using the air intake vent pipe telescopic sleeve.

3. VERTICAL VENTING INSTALLATION
   For safe and proper operation of the fireplace, follow the venting instructions exactly.
   All inner exhaust and outer intake vent pipe joints may be sealed using either high temperature sealant W573-0002 or high temperature Mill Pac W573-0007 with the exception of the fireplace exhaust flue collar which must be sealed using Mill Pac (not supplied).
   1. Move the fireplace into position.
   2. Fasten the roof support to the roof using the screws provided.
   3. Apply high temperature sealant W573-0002 (not supplied) to the outer edge of the inner end of the air terminal connector. Slip a coupler a minimum of 2" over the exhaust collar and secure using 3 screws.
   4. Apply high temperature sealant to the outer edge of the of the outside pipe of the air terminal connector. Slip a coupler over the air intake collar and secure as before. Trim the air intake coupler even with the exhaust coupler end.
   5. Thread the air terminal connector / pipe assembly down through the roof support and attach, ensuring that the air terminal will penetrate the roof a minimum 16" when fastened. If the attic space is tight, we recommend threading the Wolf Steel vent pipe collar or equivalent loosely onto the air terminal assembly as it is passed through the attic. The air terminal must be located vertically and plumb.
   6. Remove nails from the shingles, above and to the sides of the chimney. Place the flashing over the air terminal and slide it underneath the sides and upper edge of the shingles. Ensure that the air terminal is properly centered within the flashing, giving a 3/4" margin all around. Fasten to the roof. Do NOT nail through the lower portion of the flashing. Make weather-tight by sealing with caulking. Where possible, cover the sides and top edges of the flashing with roofing material.
   7. Align the seams of the terminal and air terminal connector, place the terminal over the air terminal connector making sure the inner pipe goes into the hole in the terminal. Secure with screws provided.
   8. Apply a heavy bead of weatherproof caulking 2" above the flashing. Note: Maintain a minimum of 2" space between the air inlet base and the storm collar. Install the storm collar around the air terminal and slide down to the caulking. Tighten to ensure that a weather-tight seal between the air terminal and the collar is achieved.
   9. Continue adding rigid venting sections, sealing and securing as above. Attach an exhaust telescopic sleeve to the last section of rigid piping. Secure with screws and seal. Repeat using an air intake telescopic sleeve.
   10. REAR VENT APPLICATION: (BGD36CFG ONLY: Before attaching elbows to the collars on the back of the fireplace, 1½" will need to be trimmed off the exhaust pipe collar.) Run a bead of high temperature sealant W573-0007 (not supplied) around the outside of the exhaust collar. Attach the exhaust elbow to the exhaust collar and secure with 3 screws. Run a bead of high temperature sealant W573-0002 (not supplied) around the outside of the air intake collar. Attach the air intake elbow to the air intake collar and secure with 3 screws. Pull the exhaust telescopic sleeve a minimum 2" onto the elbow. Secure with 3 screws. Repeat with the air intake telescopic sleeve.

   TOP VENT APPLICATION: Run a bead of high temperature sealant W573-0007 (not supplied) around the outside of the exhaust on the fireplace. Pull the exhaust telescopic sleeve a minimum of 2" onto the collar. Secure with 3 screws. Repeat with the air intake telescopic sleeve.

   11. In the attic, slide the vent pipe collar down to cover up the open end of the vent pipe shield and tighten. This will prevent any materials, such as insulation, from filling up the 1" air space around the pipe.
RESTRICTING VERTICAL VENTS

**BGD42CF ONLY**: Vertical terminations may display a very active flame. As this appearance is not desirable, the vent exit must be restricted using restrictor plate, W500-0205. This reduces the velocity of the exhaust gases, slowing down the flame pattern and creating a more traditional appearance. The plate has a series of holes to allow for adjustment.

Remove the two screws on either side of the exhaust collar inside the firebox. Install the plate as shown. Install the plate on the desired set of holes then replace the screws.

**FIGURE 65**

**NOTE**: All gas connections must be contained within the firebox when complete.

1. Move the fireplace into position and secure to the floor through the 1/4” holes located at either side of the base.
2. The fireplace is designed to accept 3/8” gas supply line. The fireplace is equipped with a 3/8” manual shut-off valve.
3. Connect the gas supply in accordance to local codes. In the absence thereof, install according to the National Installation Code.
4. When flexing any gas line, support the gas valve so that the lines are not bent or kinked.
5. Check for gas leaks by brushing on a soap and water solution.

**DO NOT USE OPEN FLAME.**

Purge all gas lines with the glass door of the stove removed. Assure that a continuous gas flow is at the burner before re-installing the door.

**MOBILE HOME INSTALLATION**

This appliance may be installed as an OEM (Original Equipment Manufacturer) Installation in a manufactured home or mobile home and must be installed in accordance with the manufacturer's instructions and the Manufactured Home Construction and Safety Standard, Title 24 CFR, Part 3280, in the United States or the Mobile Home Standard, CAN/CSA Z240 MH Series, in Canada. This appliance is only for use with the type(s) of gas indicated on the rating plate. A conversion kit is supplied with the mobile home appliance.

This Mobile/Manufactured Home listed appliance comes factory equipped with means to secure the unit.

The fireplace is equipped with two 1/4” diameter holes located in the front left and right corners of the base. For mobile home installations, the fireplace must be fastened in place. Use #10 screws, inserted through the holes in the base to secure.

Always turn off the pilot and the fuel supply at the source, prior to moving the mobile home.

After moving the mobile home and prior to lighting the fireplace, permanently ensure that the logs are positioned correctly.

**CONVERSION KITS**

The mobile home appliance is field convertible between Natural Gas (NG) and Propane (LP).

To convert from one gas to another consult your Napoleon® dealer/distributor.

**OPTIONAL WALL SWITCH INSTALLATION EXCLUDING BGD36CFG**

For remote wall switch and decorative light installations for the BGD-36CFG see section **“BGD36CFG SWITCH/WIRING DIAGRAM”**.

For ease of accessibility, an optional remote wall switch may be installed in a convenient location. A 20ft length of millivolt wire is connected to the gas valve for the wall switch. However, if a greater length is required route 2-strand (solid core) millivolt wire through the electrical hole located at the bottom left side of the unit. The recommended maximum lead length depends on wire size:

<table>
<thead>
<tr>
<th>WIRE SIZE</th>
<th>MAX. LENGTH</th>
</tr>
</thead>
<tbody>
<tr>
<td>14 gauge</td>
<td>100 feet</td>
</tr>
<tr>
<td>16 gauge</td>
<td>60 feet</td>
</tr>
<tr>
<td>18 gauge</td>
<td>40 feet</td>
</tr>
</tbody>
</table>

Do not connect either the wall switch, thermostat or gas valve directly to 110 volt electricity.
It is not necessary to install a hearth extension with this fireplace system. Objects placed in front of the fireplace should be kept a minimum of 48” away from the front face.

When roughing in the fireplace, raise the fireplace to accommodate for the thickness of the finished floor materials, i.e. tile, carpeting, hardwood, which if not planned for will interfere with the opening of the lower access door and the installation of many decorative flashing accessories.

**Note:** In order to avoid the possibility of exposed insulation or vapor barrier coming in contact with the fireplace body, it is recommended that the walls of the fireplace enclosure be “finished” (i.e. drywall/sheetrock), as you would finish any other outside wall of a home. This will ensure that clearance to combustibles is maintained within the cavity.

Combustible materials may be installed flush with the front of the fireplace but must not cover any of the black face-areas of the fireplace. Non-combustible material (brick, stone or ceramic tile) may protrude in these areas but must not restrict glass door removal.

### Installing Standoffs

Both the BGD36CF(G) and BGD42CF are supplied with two standoffs. For convenience, the standoffs have been shipped flat and located on the top at the front. Before framing ensure the standoffs are bent up and screwed into place ensuring a height of 4.5”.

**NOTE:** The information and dimensions in this section represent the minimum clearances to combustible material.

It is best to frame your fireplace after it is positioned and the vent system is installed. Use 2x4’s and frame to local building codes.

**BGD36CF(G) ONLY:** A steel header is required if using optional clean face surround.

**FIGURE 67**

**FIGURE 68**
Non-combustible materials such as brick and tile can be extended over the black face of the unit.

**Warning:** Non-combustible Finishing Materials Required

Non-combustible materials such as brick and tile can be extended over the black face of the unit.

**FIGURE 69**

**FIGURE 70**

**FIGURE 71**

**FIGURE 72**

**IMPORTANT:**
Encroaching in this area with finishing material will interfere with the opening of the door.

**FIGURE 73**

**FIGURE 74**

**FIGURE 75**

**FIGURE 76**

The finishing material can be installed below the top opening a maximum of 1 1/2". Enough clearance to the door latches must be maintained to allow for proper door installation / removal.
BGD36CF(G) MINIMUM MANTEL AND ENCLOSURE CLEARANCES

Combustible mantel clearance can vary according to the mantel depth. Use the graph to help evaluate the clearance needed.

**FIGURE 77**

The fireplace requires a minimum enclosure height of 38 1/2" (REAR VENT) 49" (TOP VENT). For temperature requirements, the enclosure space around and above the fireplace must be left unobstructed.

**FIGURE 78**

* If this unit is installed flush to the finishing material and optional clean face surround is to be installed then a minimum of 6 1/2" of cement board or non-combustible equivalent must be used on the top only of the front face. See Figure 80.

**FIGURE 79**

**FIGURE 80**

* See Venting Section

**FIGURE 80**

* See Venting Section
Installation requires a minimum of 6 1/2" non-combustible facing material above the top of the fireplace. Refer to either Figure 86a or Figure 86b (depending on your installation) to ensure your fireplace has been installed with the proper requirements for this kit.

Whether installing to a finished floor or a hearth, a 3/8" clearance must be maintained at the bottom of the clean face surround kit. To obtain this clearance a fireplace riser is required.

**OPTIONAL CLEAN FACE SURROUND INSTALLATION BGD36CF(G) ONLY**

- **WAVE**
  - S36WN (BROWN)
  - S36WP (PEWTER)

- **CONVEX**
  - S36CVN (BROWN)
  - S36CVP (PEWTER)

- **CONCAVE**
  - S36CCN (BROWN)
  - S36CCP (PEWTER)

Installation requires a minimum of 6 1/2" non-combustible facing material at the top of the fireplace. Refer to either Figure 86a or Figure 86b (depending on your installation) to ensure your fireplace has been installed with the proper requirements for this kit.

Whether installing to a finished floor or a hearth, a 3/8" clearance must be maintained at the bottom of the clean face surround kit. To obtain this clearance a fireplace riser is required.

**FINISHED FLOOR INSTALLATION**

When installing to a finished floor the fireplace riser must create a minimum clearance of 3 3/8" from the finished floor to the bottom of the fireplace.
HEARTH INSTALLATION

When installing to a hearth the fireplace riser must create a minimum clearance of 3 3/8" PLUS the height of the hearth from the finished floor to the bottom of the fireplace.

OPTIONAL CLEAN FACE TRIM KIT INSTALLATION

The “wave” clean face surround kit is shown in all illustrations.

NOTE: THE OPTIONAL CLEAN FACE TRIM KIT MUST BE INSTALLED BEFORE PROCEEDING.

1. From the rear side of the clean face surround, insert the weld studs on the top window plate assembly upward through the holes on the underside of the top section of the clean face surround. (FIGURE 87)

2. Using a socket wrench, secure using the nuts and washers provided. Depending on your surround, space may be tight. (FIGURE 87)

3. First secure the clean face surround to the fireplace front by hooking the ledge that runs horizontally on the rear surface of the clean face surround over the bottom edge of the fireplace front opening. (FIGURE 89)

4. With the clean face surround against the fireplace front, hook the surround clips in behind the top lip of the fireplace front opening (FIGURE 89) and secure using the screws provided through the slot in the surround clip and into the pre-drilled hole in the clean face surround. (FIGURE 89) If the optional clean face trim kit was installed, the surround clip fits into the cut out and is secured in the same fashion. (FIGURE 90)
Combustible mantel clearance can vary according to the mantel depth. Figure 92. Use the graph to help evaluate the clearance needed. These same requirements apply to any combustibles protruding on either side of the fireplace.

**FIGURE 92a**

The fireplace requires a minimum enclosure height of 49". For temperature requirements, the enclosure space around and above the fireplace must be left unobstructed.

* See Venting Section

**FIGURE 92b**

This fireplace requires a minimum of 6 1/2" of cement board or non-combustible equivalent above the top of the fireplace.

**FIGURE 92c**

**WARNING**

Use only non-combustible material such as cement board, ceramic tile, marble, etc. when finishing to the fireplace. DO NOT USE WOOD OR DRYWALL.
FINISHING
BGD36CF FINISHING

LOG PLACEMENT

PHAZERTM logs and glowing embers exclusive to Napoleon® Fireplaces, provide a unique and realistic glowing effect that is different in every installation. Take the time to carefully position the glowing embers for a maximum glowing effect.

Log colours may vary. During the initial use of the fireplace, Log colours may vary. During the initial use of the fireplace the colours will become more uniform as colour pigments burn in during the heat activated curing process.

1. Place the back log (#1) onto the log support tray and in front of the tabs. The tabs maintain an air space between the log and firebox back to facilitate combustion air flow. Ensure that the back of the log rests against the brackets on the back wall of the firebox.

2. Move the two small logs (#2 & #3) into position, lining up the studs located on the burner with the holes on the bottom of the logs. Ensure that the small logs sit flat on the burner.

3. Place the bottom of the left crossover log (#4) against the left firebox side and pulled forward to the grate. The top of the log should rest in the pocket on the back log.

4. Position the base end of the center log (#5) against the middle grate post with the other end of the log resting in the pocket of the left crossover log.

5. Place the bottom of the right crossover log (#6) against the right firebox side and pulled forward to the grate. The top of the log should rest in the pocket provided on the center log (#5).

BGD36CF(G) GLASS/DOOR REPLACEMENT

1. Place the door frame face down careful not to scratch the paint.

2. Center the gasketed glass inside the door frame with the thick side of the gasket facing up.

3. Bend the glass retainers located along the edge of the door frame over the gasket holding the glass in place. Careful not to break the glass.

BGD42CF FINISHING

DOOR INSTALLATION / REMOVAL

Open the Valve Access Door. While holding the door securely, release the 4 latches along the top of the door. Tilt the door forward and lift off of the two brackets at the bottom of the door. When replacing the door, rest the door on the brackets ensuring that lip of the brackets rest in the groove in the bottom edge of the door. Push the door backward into place and secure with the 4 latches.

REMOVING THE VALVE ACCESS DOOR

1. The valve access door rotates on the pins attached to the side frame. Lift the valve access door off the pins to operate the main glass door.

GLASS/DOOR REPLACEMENT

Only available as an assembly complete with frame W010-0770. Glass not available seperately.
**GRATE INSTALLATION**

The grate for this fireplace has been removed for shipping purposes. The grate must be installed before the logs are installed. Remove the packaging from the grate and install onto the two pins as illustrated.

**LOG PLACEMENT**

**PHAZER™** logs and glowing embers, exclusive to Napoleon® Fireplaces, provide a unique and realistic glowing effect that is different in every installation. Take the time to carefully position the glowing embers for a maximum glowing effect. Log colours may vary. During the initial use of the fireplace, the colours will become more uniform as colour pigments burn in during the heat activated curing process.

1. Place the cutout in the bottom of log #1 behind the pilot assembly. Rest the log against the back wall of the firebox.

2. Move the two small logs (#2 & #3) into position, lining up the studs located on the burner with the holes on the bottom of the logs. Care should be taken to shred the embers into thin, small irregular pieces as only the exposed edges of the fibre hairs will glow. The ember material will only glow when exposed to direct flame; however, care should be taken to not block the burner ports. Blocked burner ports can cause an incorrect flame pattern, carbon deposits and delayed ignition. **PHAZER™** logs glow when exposed to direct flame.

4. Place the bottom of the left crossover log (#4) onto the stud on the left side of the log support. The top of the log should rest in the pocket on the back log.

5. Place the bottom of the right crossover log (#5) onto the stud on the right side of the log support. The top of the log should rest in the pocket on the left crossover log (#4).
COMMON FINISHING BGD36CF / BGD42CF

GLOWING EMBERS

Tear the embers into pieces and place along the front row of ports covering all of the burner area in front of the small logs (#2 & #3). Care should be taken to shred them into thin, small irregular pieces as only the exposed edges of the fibre hairs will glow. The ember material will only glow when exposed to direct flame; however, care should be taken to note block the burner ports. Blocked burner ports can cause an incorrect flame pattern, carbon deposits and delayed ignition. PHAVER™ logs glow when exposed to direct flame. Use only certified "glowing embers" and PHAVER™ logs available from your Napoleon® dealer.

CHARCOAL EMBERS

Randomly place the charcoal embers along the front and sides of the log support tray in a realistic manner. Fine dust found in the bottom of the bag should not be used.

VERMICULITE

Sprinkle vermiculite around the charcoal embers. Note: Both charcoal embers and vermiculite are not to be placed on the burner.

CHARCOAL LUMPS (BGD42CF ONLY)

Place the lumps between the logs in a realistic manner taking care not to block any of the burner ports.

LOGO PLACEMENT

Remove the backing of the logo supplied and place on the glass viewing door, as indicated.

BGD36CFG FINISHING

GLASS BURNER INSTALLATION

Spread the clear glass embers (W300-0102) onto the glass ember tray evenly covering the burner tube (follow natural shape of tray).

Note: The distribution of clear glass embers over the burner tube will influence the flame height.

BGD36CFG BULB REPLACEMENT

The BGD36CFG comes equipped with our "Night Light™". If in the event the lamp or lens needs to be replaced, follow these instructions.

1. Turn off all electrical supply.
2. Remove the glass and glass ember tray from the firebox.
3. Unscrew the lens cover making sure the gasket stays in place.

Note: Do not handle the lamp (bulb) with bare fingers, protect with a clean dry cloth.

4. The lamp will pull straight out of the socket. Replace with Wolf Steel Ltd. parts only (W387-0006), as lamp and lens are special "high temperature" products.
5. Replace lens cover.
6. Replace glass and ember tray.

BGD36CFG LENS ASSEMBLY REPLACEMENT

1. Remove the glass and glass ember tray.
2. Remove the burner base from the firebox.
3. Compress the retainer fins and lift out the lens assembly, disconnect the wires.
4. Replace lens assembly by aligning key hole and snap into place, re-connect wires.
5. Re-install burner base ensuring a good firebox seal.
6. Re-install glass ember tray and glass.

WARNING

The front of the fireplace becomes very hot during operation. Let the fireplace cool completely before conducting service.

NOTE: When removing the glass ember tray make sure the glass embers are away from the center of the screen, exposing the burner, before lifting glass ember tray out.

When replacing burner, absolutely no glass embers can be in cup surrounding the orifice. HINT: If glass falls into cup and surrounds the orifice, insert a clean bag into a vacuum cleaner and vacuum out glass embers or replacement glass embers can be ordered from Wolf Steel Ltd.
OPTIONAL BLOWER INSTALLATION

BGD36CF(G) ACCESSING THE BLOWER
1. Remove the valve access door.
2. Open the main door.
3. Carefully remove the logs.
4a. (BGD36CFG) Carefully remove the glass and glass ember tray.
4. Remove the 7 screws illustrated in Fig. 112a and lift out the log support.
4a. (BGD36CFG) Remove the top deflector and porcelain panels from the firebox. (See Figure 109).
5. Remove the 8 perimeter screws as illustrated in Fig. 112a and lift out the burner base. (The gas line flex-connector should provide sufficient movement to permit shifting the burner assembly to the side).
6. Reverse procedure to re-assemble.

FIGURE 112a

BGD42CF ACCESSING THE BLOWER
1. Remove the main door using the instructions on Pg #29.
2. Carefully remove the logs.
3. Remove the grate by lifting it off of the two securing pins.
4. Remove the 6 screws illustrated in Fig. 112b and lift out the log support. Be careful not to lose the spacers for the screws indicated.
5. Remove the 7 perimeter screws as illustrated in Fig. 113 and lift out the burner base. (The gas line flex-connector should provide sufficient movement to permit shifting the burner assembly to the side).
6. Reverse procedure to re-assemble.

FIGURE 113

INSTALLING THE BLOWER

If the fireplace was not previously equipped with a blower: route a grounded 2-wire, 60hz power cable to the receptacle/junction box. At this point, it must be strain relieved and insulated.

Because the blower is thermally activated, when turned on, it will automatically start approximately 10 minutes after lighting the fireplace and will run for approximately 30-45 minutes after the fireplace has been turned off. Use of the fan increases the output of heat.

The three slots on the blower mounting bracket allow ease of adjustment when attaching the blower. For a quiet running blower, do not allow the assembly to sit on the firebox base.

Slide the vibration reducing pad (A) into the clip (C) and up against the threaded stud (B) at the other end. The blower must be able to be positioned entirely onto the pad.

To ease installation of the blower, remove the hinge screen and valve control door (lower louvres) from the base of the fireplace.

Tilt the blower onto its side. Slide it past the controls and into the clip (C). Secure to the threaded stud using the lock washer and wing nut provided. Ensure that the blower does not touch the fireplace base or the firebox.

SPACERS

FIGURE 114

FIGURE 116

FIGURE 117

FIGURE 118a

FIGURE 118b
Drywall dust will penetrate into the blower bearings, causing irreparable damage. Care must be taken to prevent drywall dust from coming into contact with the blower or its compartment. Any damage resulting from this condition is not covered by the warranty policy.

**Figure 119**

Attach the connectors from the black and white wires to the thermodisc and secure the thermodisc bracket to the securing stud at the bottom left of the unit using a lock washer and wing nut. Ensure that the thermodisc touches the firebox wall.

Attach and secure the variable speed switch using the nut provided. Plug the harness cord into the receptacle.

**Figure 120**

To safety install the fan, turn off the electricity first.

*If the fireplace was not previously equipped with a fan:* route a grounded 2-wire, 60hz power cable to the junction box. At this point, it must be strain relieved and insulated.

The wire harness provided in this kit is a universal harness. When installed, ensure that any excess wire is contained, preventing it from making contact with moving or hot objects.

To ease installation of the fan, remove the hinge screen and valve control door (lower louvres) from the base of the fireplace.

Position the vibration reducing pad into the clip and onto the threaded stud at the other end, piercing a hole into the pad. The fan assembly must be able to be positioned entirely onto the pad.

Slide the fan assembly past the controls and into the clip. Secure using the lock washer and nut provided.

Plug the harness cord into the receptacle.

**Figure 121**

**Figure 122**

**Figure 123**

**Figure 124**

---

**Optional Fan Installation**

Electrical installation to be done by a qualified installer and must be connected and grounded in accordance with local codes. In the absence of local codes, use the current CSA C22.1 Canadian Electrical Code in Canada or the ANSI/NFPA 70 National Electrical Code in the United States.

*Figure 121*

---

**GD36 Thermostatic Sensor Control**

This optional kit is meant to be used only in conjunction with the GD65 Fan Kit, shown above, which may be ordered from your Wolf Steel / Napoleon® dealer.

With the thermostatic sensor option, the fan, when turned on, becomes thermally activated, and will automatically run approximately 15-30 minutes after the fireplace has been lit and for approximately 30-45 minutes after the fireplace has been turned off.

Use of the fan increases the output of heat.

Unplug the power cord from the receptacle. Connect all wires as shown.

*Figure 123*
A wall switch must be installed in a convenient location for the burner operation. The recommended maximum lead length depends on wire size:

<table>
<thead>
<tr>
<th>WIRE SIZE</th>
<th>MAX. LENGTH</th>
</tr>
</thead>
<tbody>
<tr>
<td>14 gauge</td>
<td>100 feet</td>
</tr>
<tr>
<td>16 gauge</td>
<td>60 feet</td>
</tr>
<tr>
<td>18 gauge</td>
<td>40 feet</td>
</tr>
</tbody>
</table>

A 20' length of millivolt wire is connected to the gas valve for the burner wall switch. However, if a greater length is required route 2-strand (solid core) wire through the electrical hole located at the bottom left side of the unit.

**FIGURE 125**

![Wiring Diagram]

**NOTE:** Wire tags are bracketed.
A wall switch must be installed in a convenient location for the light operation. The recommended maximum lead length depends on wire size:

<table>
<thead>
<tr>
<th>WIRE SIZE</th>
<th>MAX. LENGTH</th>
</tr>
</thead>
<tbody>
<tr>
<td>14 gauge</td>
<td>100 feet</td>
</tr>
<tr>
<td>16 gauge</td>
<td>60 feet</td>
</tr>
<tr>
<td>18 gauge</td>
<td>40 feet</td>
</tr>
</tbody>
</table>

A 20' length of millivolt wire is connected to the gas valve for the light wall switch. However, if a greater length is required, route 2-strand (solid core) wire through the electrical hole located at the bottom left side of the unit.
After extended periods of non-operation such as following a vacation or a warm weather season, the fireplace may emit a slight odour for a few hours. This is caused by dust particles in the heat exchanger burning off. In both cases, open a window to sufficiently ventilate the room.

FOR YOUR SAFETY READ BEFORE LIGHTING:

A. This fireplace is equipped with a pilot which must be lit by hand while following these instructions exactly.
B. Before operating smell all around the fireplace area for gas and next to the floor because some gas is heavier than air and will settle on the floor.
C. Use only your hand to turn the gas control knob. Never use tools. If the knob will not turn by hand, do not try to repair it. Call a qualified service technician. Force or attempted repair may result in a fire or explosion.
D. Do not use this fireplace if any part has been under water. Immediately call a qualified service technician to inspect the fireplace and replace any part of the control system and any gas control which has been under water.

WHAT TO DO IF YOU SMELL GAS:

• Turn off all gas to the fireplace.
• Open windows.
• Do not try to light any appliance.
• Do not touch any electric switch; do not use any phone in your building.
• Immediately call your gas supplier from a neighbour’s phone. Follow the gas supplier’s instructions.
• If you cannot reach your gas supplier, call the fire department.

LIGHTING INSTRUCTIONS

WARNING: The gas valve has an interlock device which will not allow the pilot burner to be lit until the thermocouple has cooled. Allow approximately 60 seconds for the thermocouple to cool.

When lighting and re-lighting, the gas knob cannot be turned from pilot to off unless the knob is depressed slightly.

1. Stop! Read the above safety information on this label.
2. Turn off all electric power to the fireplace.
3. Turn the gas knob clockwise to off.
4. Wait five (5) minutes to clear out any gas. If you smell gas including near the floor. Stop! Follow "B" in the above safety information on this label. If you don’t smell gas go the next step.
5. Turn gas knob counter-clockwise to pilot.
6. Depress slightly and hold gas knob while lighting the pilot with the push button igniter. Keep knob depressed for one minute, then release. If pilot does not continue to burn, repeat steps 3 through 5.
7. With pilot lit, depress and turn gas knob counter-clockwise to on.
8. If equipped with remote on-off switch/thermostat, main burner may not come on when you turn valve to on. Remote switch must be in the on position to ignite burner.
9. Turn on all electric power to the fireplace.

TO TURN OFF GAS

1. Turn off all electric power to the fireplace if service is to be performed.
2. Push in gas control knob slightly and turn clockwise to off. Do not force.

TURN THE CONTROL VALVE TO THE OFF POSITION WHEN HEATER IS NOT IN USE.
OPERATION BGD36CFG
FOR YOUR SAFETY READ BEFORE OPERATING

WARNING

IF YOU DO NOT FOLLOW THESE INSTRUCTIONS EXACTLY, A FIRE OR EXPLOSION MAY RESULT IN PROPERTY DAMAGE, PERSONAL INJURY OR LOSS OF LIFE.

A. THIS FIREPLACE IS EQUIPPED WITH AN IGNITION DEVICE WHICH AUTOMATICALLY LIGHTS THE PILOT. DO NOT TRY TO LIGHT BY HAND.
B. BEFORE OPERATING SMELL ALL AROUND THE FIREPLACE AREA FOR GAS AND NEXT TO THE FLOOR BECAUSE SOME GAS IS HEAVIER THAN AIR AND WILL SETTLE ON THE FLOOR.
C. USE ONLY YOUR HAND TO TURN THE GAS CONTROL KNOB. NEVER USE TOOLS. IF THE KNOB WILL NOT TURN BY HAND, DO NOT TRY TO REPAIR IT. CALL A QUALIFIED SERVICE TECHNICIAN. FORCE OR ATTEMPTED REPAIR MAY RESULT IN A FIRE OR EXPLOSION.
D. DO NOT USE THIS FIREPLACE IF ANY PART HAS BEEN UNDER WATER. IMMEDIATELY CALL A QUALIFIED SERVICE TECHNICIAN TO INSPECT THE FIREPLACE AND REPLACE ANY PART OF THE CONTROL SYSTEM AND ANY GAS CONTROL WHICH HAS BEEN UNDER WATER.

WHAT TO DO IF YOU SMELL GAS:
• TURN OFF ALL GAS TO THE FIREPLACE.
• OPEN WINDOWS.
• DO NOT TRY TO LIGHT ANY APPLIANCE.
• DO NOT TOUCH ANY ELECTRIC SWITCH; DO NOT USE ANY PHONE IN YOUR BUILDING.
• IMMEDIATELY CALL YOUR GAS SUPPLIER FROM A NEIGHBOUR’S PHONE FOLLOW THE (GAS SUPPLIER’S) INSTRUCTIONS.
• IF YOU CANNOT REACH YOUR GAS SUPPLIER, CALL THE FIRE DEPARTMENT.

OPERATING INSTRUCTIONS

1. STOP! READ THE ABOVE SAFETY INFORMATION ON THIS LABEL.
2. TURN REMOTE WALL SWITCH TO OFF POSITION.
3. TURN OFF ALL ELECTRIC POWER TO THE FIREPLACE AND REMOVE BATTERIES.
4. THIS FIREPLACE IS EQUIPPED WITH AN IGNITION DEVICE WHICH AUTOMATICALLY LIGHTS THE PILOT. DO NOT TRY TO LIGHT THE PILOT BY HAND.
5. TURN MANUAL SHUTOFF VALVE CLOCKWISE TO OFF.
6. OPEN THE GLASS DOOR.
7. WAIT FIVE (5) MINUTES TO CLEAR OUT ANY GAS. IF YOU SMELL GAS INCLUDING NEAR THE FLOOR, STOP! FOLLOW "B" IN THE ABOVE SAFETY INFORMATION ON THIS LABEL. IF YOU DON'T SMELL GAS GO TO THE NEXT STEP.

TO TURN OFF GAS

1. TURN OFF REMOTE WALL SWITCH TO THE FIREPLACE.
2. TURN OFF ALL ELECTRIC POWER TO THE FIREPLACE IF SERVICE IS TO BE PERFORMED.
3. TURN MANUAL SHUTOFF VALVE CLOCKWISE TO OFF. DO NOT FORCE.

MAINTENANCE

TURN OFF THE GAS AND ELECTRICAL POWER BEFORE SERVICING THE FIREPLACE.

CAUTION: Label all wires prior to disconnection when servicing controls. Wiring errors can cause improper and dangerous operation. Verify proper operation after servicing. This fireplace and its venting system should be inspected before use and at least annually by a qualified service person. The fireplace area must be kept clear and free of combustible materials, gasoline or other flammable vapours and liquids. The flow of combustion and ventilation air must not be obstructed.

1. In order to properly clean the burner and pilot assembly, remove the logs to expose both assemblies.
2. Keep the control compartment, logs, burner, air shutter opening and the area surrounding the logs clean by vacuuming or brushing, at least once a year.
3. Check to see that all burner ports are burning. Clean out any of the ports which may not be burning or are not burning properly.
4. Check to see that the pilot flame is large enough to engulf the thermocouple and thermopile and reaches toward the burner with the third jet.
5. Replace the cleaned logs.
6. Check to see that the main burner ignites completely on all openings when the gas knob for the burner is turned on. A 5 to 10 second total light-up period is satisfactory. If ignition takes longer, consult your Napoleon® dealer / distributor.
7. Check that the gasketing on the sides, top and bottom of the door is not broken or missing. Replace if necessary.
Both fireplace models have air shutters that have been factory set open according to the chart below:

<table>
<thead>
<tr>
<th></th>
<th>BGD36CF</th>
<th>BGD36CFG</th>
<th>BGD42CF</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>NG</strong></td>
<td>1/16&quot;</td>
<td>*</td>
<td>1/4&quot;</td>
</tr>
<tr>
<td><strong>LP</strong></td>
<td>1/4&quot;</td>
<td>*</td>
<td>7/16&quot;</td>
</tr>
</tbody>
</table>

These settings are for (maximum) horizontal termination. Adjustment may be required depending on fuel type, vent configuration and altitude.

Closing the air shutter will cause a more yellow flame, but can lead to carboning. Opening the air shutter will cause a more blue flame, but can cause flame lifting from the burner ports. The flame may not appear yellow immediately; allow 15 to 30 minutes for the final flame colour to be established.

Air shutter adjustment must only be done by a qualified installer!

To access the air shutter, remove the control panel, remove the two screws that secure the cover to the air housing, loosen the set screw and adjust air shutter position.

**WARNING**

The front of the fireplace becomes very hot during operation. Let the fireplace cool completely before conducting service.

NOTE: When removing the glass ember tray make sure the glass embers are away from the center of the screen, exposing the burner, before lifting glass ember tray out.

When replacing burner, absolutely no glass can be in cup surrounding the orifice. HINT: If glass falls into cup and surrounds the orifice, insert a clean bag into a vacuum cleaner and vacuum out glass embers or replacement glass embers can be ordered from Wolf Steel Ltd.
# FLAME ADJUSTMENT

It is important to periodically perform a visual check of the pilot and the burner flames. Compare them to the figures shown. If any flames appear abnormal call a service person.

## BGD36CF FLAME CHARACTERISTICS

It is important to periodically perform a visual check of the pilot and the burner flames. Compare them to the figures shown. If any flames appear abnormal call a service person.

## BGD42CF FLAME CHARACTERISTICS

It is important to periodically perform a visual check of the pilot and the burner flames. Compare them to the figures shown. If any flames appear abnormal call a service person.

## BGD36CFG FLAME CHARACTERISTICS

It is important to periodically perform a visual check of the pilot and the burner flames. Compare them to the figures shown. If any flames appear abnormal call a service person.
COMMON REPLACEMENTS

Contact your dealer for questions concerning prices and availability of replacement parts. Normally all parts can be ordered through your Napoleon® dealer or distributor. When ordering replacement parts always give the following information:

1. MODEL & SERIAL NUMBER OF FIREPLACE
2. INSTALLATION DATE OF FIREPLACE
3. PART NUMBER
4. DESCRIPTION OF PART
5. FINISH
6. TOP OR REAR VENT

* IDENTIFIES ITEMS WHICH ARE NOT ILLUSTRATED. FOR FURTHER INFORMATION, CONTACT YOUR NAPOLEON® DEALER.

WARNING

Failure to position the parts in accordance with these diagrams or failure to use only parts specified approved with this appliance may result in property damage or personal injury.

# BGD36CFG TROUBLESHOOTING GUIDE

**BEFORE ATTEMPTING TO TROUBLESHOOT, PURGE YOUR UNIT AND INITIALLY LIGHT THE PILOT AND THE MAIN BURNER WITH THE GLASS DOOR REMOVED.**

<table>
<thead>
<tr>
<th>SYMPTOM</th>
<th>PROBLEM</th>
<th>TEST SOLUTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>Pilot will not light.</td>
<td>- Wiring</td>
<td>Verify the &quot;S&quot; wire for the sensor and the &quot;I&quot; wire for the ignitor are connected to the correct terminals (not reverse) on the module and pilot assembly.</td>
</tr>
<tr>
<td>Makes noise with no spark at pilot burner</td>
<td>- Loose connection</td>
<td>Verify no loose connections, electrical shorts in the wiring or ground out to any metal object.</td>
</tr>
<tr>
<td></td>
<td>- Module</td>
<td>Turn the ON/OFF switch to the &quot;OFF&quot; position. Remove the igniter wire &quot;I&quot; from the module. Place the ON/OFF switch to the &quot;ON&quot; position. Hold a grounded wire about 3/16&quot; away from the &quot;I&quot; terminal on the module. If no spark the &quot;I&quot; terminal module must be replaced. If there is a spark the &quot;I&quot; terminal is fine. Inspect pilot assembly for a shorted wire or cracked insulator around the electrode.</td>
</tr>
<tr>
<td></td>
<td>- Igniter Spark gap is incorrect</td>
<td>- spark gap of the ignitor to the pilot should be .17&quot; tor 1/8&quot;</td>
</tr>
<tr>
<td>Pilot will not light.</td>
<td>- Transformer</td>
<td>Verify the transformer is installed and plugged into the module. Check voltage of the transformer under load at the spade connections on the module with the ON/OFF switch in the &quot;ON&quot; position. Acceptable readings of a good transformer are between 3.2 and 2.8 volts A.C.</td>
</tr>
<tr>
<td>Makes no noise with no spark at pilot burner</td>
<td>- A shorted or loose Connection</td>
<td>Remove and reinstall the wiring harness that plugs into the module. Remove and verify continuity of each wire in wiring harness.</td>
</tr>
<tr>
<td></td>
<td>- Improper switch wiring</td>
<td>Troubleshoot the system with the simplest ON/OFF switch</td>
</tr>
<tr>
<td></td>
<td>- Module is not grounded</td>
<td>Verify the value and pilot assemblies are properly grounded to the metal chassis of the fireplace or log set.</td>
</tr>
<tr>
<td></td>
<td>- Faulty module</td>
<td>Turn the ON/OFF switch to the &quot;OFF&quot; position. Remove the igniter wire &quot;I&quot; from the module. Place the ON/OFF switch to the &quot;ON&quot; position. Hold a grounded wire about 3/16&quot; away from the &quot;I&quot; terminal on the module. If no spark the &quot;I&quot; terminal module must be replaced. If there is a spark the &quot;I&quot; terminal is fine. Inspect pilot assembly for a shorted wire or cracked insulator around the electrode.</td>
</tr>
<tr>
<td>Pilot sparks but will not light</td>
<td>- Gas supply</td>
<td>Verify that the incoming gas line ball valve is &quot;Open&quot;. Verify that the inlet pressure reading is within acceptable limits, inlet pressures must not exceed 14&quot; W.C.</td>
</tr>
<tr>
<td></td>
<td>- Module is not grounded</td>
<td>Verify the value and pilot assemblies are properly grounded to the metal chassis of the fireplace or log set.</td>
</tr>
<tr>
<td></td>
<td>- Out of propane gas.</td>
<td>- fill the tank.</td>
</tr>
<tr>
<td>Continues to sparks and pilot lights, but main burner will not light</td>
<td>- Short or loose connection in sensor rod</td>
<td>Verify all connections. Verify the connections from the pilot assembly are tight; also verify these connections are not ground out to any metal.</td>
</tr>
<tr>
<td></td>
<td>- Poor flame rectification or contaminated sensor rod</td>
<td>Verify the flame is engulfing the sensor rod. This will increase the flame rectification. Verify correct pilot orifice is installed and inlet gas specifications to manual. (Remember, the flame carries the rectification current, not the gas. If the flame lifts from pilot hood, the circuit is broken. A wrong orifice or too high of an inlet pressure can cause the pilot flame to lift.) The sensor rod may need cleaning.</td>
</tr>
<tr>
<td></td>
<td>- Poor grounding between pilot assembly and gas valve</td>
<td>Verify that the wire harness is firmly connected to module Verify that the ceramic insulator around the sensor rod is not cracked, damaged, or loose. Verify the connection from the sensor rod to the sensor wire.</td>
</tr>
<tr>
<td></td>
<td>- Damaged pilot or dirty sensor rod</td>
<td>Clean sensor rod with an emery cloth to remove any contamination that may have accumulated on the sensor rod. Verify continuity with multimeter with ohms set at the lowest range.</td>
</tr>
</tbody>
</table>
## BGD36CFG TROUBLE SHOOTING GUIDE

<table>
<thead>
<tr>
<th>SYMPTOM</th>
<th>PROBLEM</th>
<th>TEST SOLUTION</th>

</thead>
<tbody>
<tr>
<td>Pilot lights</td>
<td>- Wiring / Connection</td>
<td>Inspect all wires, ensure good tight connections. Verifying that all wiring is installed exactly as specified.</td>
</tr>
<tr>
<td>Stops sparking</td>
<td></td>
<td></td>
</tr>
<tr>
<td>/ pilot remains lit</td>
<td>- Wiring harness</td>
<td>Inspect the wiring harness, and verify the harness is tightly connected to the module. Verify that you have 7 wires and they are connected in the right order.</td>
</tr>
<tr>
<td>but burner will</td>
<td></td>
<td></td>
</tr>
<tr>
<td>not turn on</td>
<td>- Module or Valve</td>
<td>Conduct the following test to verify if the problem is the module or valve. To measure voltages, turn multimeter to &quot;DC&quot; place the red lead from multimeter on the screw on the terminal block for the wire you are checking, touch black lead to ground (valve body). Importantly, a &quot;Zero&quot; volts reading does not automatically indicate a bad module, there may be too little resistance in the valve solenoid. Check the Green wire disconnected from valve that the voltage output from the module should be between 2 and 3 volts</td>
</tr>
<tr>
<td>Exhaust fumes smelled in</td>

<tr>
<td>Pilot goes out while standing; Main burner is in 'OFF' position.</td>
<td>Gas piping is undersized.</td>
<td>- turn on all gas appliances and see if pilot flame flutters, diminishes or extinguishes, especially when main burner ignites. Monitor appliance supply working pressure. - check if supply piping size is to code. Correct all undersized piping.</td>
</tr>
</tbody>
</table>
## BGD36CF / BGD42CF TROUBLE SHOOTING GUIDE

<table>
<thead>
<tr>
<th>SYMPTOM</th>
<th>PROBLEM</th>
<th>TEST SOLUTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>Flames are consistently too large or too small. Carboning occurs.</td>
<td>Unit is over-fired or under-fired.</td>
<td>- check pressure readings: Inlet pressure can be checked by turning screw (A) counter-clockwise 2 or 3 turns and then placing pressure gauge tubing over the test point. Gauge should read 7&quot; (minimum 4.5&quot;) water column for natural gas or 13&quot; (11&quot; minimum) water column for propane. Check that main burner is operating on &quot;HI&quot;. Outlet pressure can be checked the same as above using screw (B). Gauge should read 3.5&quot; water column for natural gas or 10&quot; water column for propane. Check that main burner is operating on &quot;HI&quot;. AFTER TAKING PRESSURE READINGS, BE SURE TO TURN SCREWS CLOCKWISE FIRMLY TO RESEAL. DO NOT OVER TORQUE. Leak test with a soap and water solution.</td>
</tr>
<tr>
<td>Flames are very aggressive.</td>
<td>Door is ajar</td>
<td>- tighten screws holding door in place</td>
</tr>
<tr>
<td></td>
<td>MODEL BGD42CF ONLY: Aggressive venting action due to vent height.</td>
<td>- Restrict vent exit. See &quot;RESTRICTING VERTICAL VENTS&quot;.</td>
</tr>
<tr>
<td></td>
<td>Blockage in vent.</td>
<td>- remove blockage. In really cold conditions, ice buildup may occur on the terminal and should be removed as required.</td>
</tr>
<tr>
<td></td>
<td>Incorrect installation.</td>
<td>- refer to Figure ### to ensure correct location of storm collars.</td>
</tr>
<tr>
<td></td>
<td>Carbon is being deposited on glass, logs or combustion chamber surfaces.</td>
<td>- check that the logs are correctly positioned.</td>
</tr>
<tr>
<td></td>
<td>Air shutter has become blocked</td>
<td>- ensure air shutter opening is free of lint or other obstructions.</td>
</tr>
<tr>
<td></td>
<td>Flame is impinging on the logs or combustion chamber.</td>
<td>- adjust input rate: check the manifold pressure and orifice size as specified by the rating plate values.</td>
</tr>
<tr>
<td></td>
<td>MODEL BGD36CF(G) ONLY:</td>
<td>- check that the door gasketing is not broken or missing and that the seal is tight.</td>
</tr>
<tr>
<td></td>
<td>White / grey film forms.</td>
<td>- check that both 4&quot;/5&quot; and 7&quot; vent liners are free of holes and well sealed at all joints.</td>
</tr>
<tr>
<td></td>
<td>Exhaust fumes smelled in room, headaches.</td>
<td>- check that minimum rise per foot has been adhered to for any horizontal venting.</td>
</tr>
<tr>
<td></td>
<td>Fireplace is spilling.</td>
